(54) MATERIAL FOR FOOD PRESERVATION DEVICE

(57)Abstract:

PURPOSE: To obtain a food preservation material, by laminating the surface of a substrate with thin film of a water- or oil-dispersion containing an active substance.

CONSTITUTION: A thin film of an aqueous dispersion obtained, e.g. by heating and gelatinizing a mixture of starch and an aqueous solution of wood vinegar, or an oil dispersion obtained e.g. by dissolving stearic acid in hot absolute ethanol, neutralizing the stearic acid with alcoholic potash, and gelatinizing by cooling to room temperature, is applied to the inner wall of a food container by gravure printing.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]
